

Strategic Evaluation (encrypted file version).

This opportunity is absolutely worth keeping and developing.

It combines:

Extremely low entry and holding cost

Secure land control

Legal rights to develop, sublease, and earn

High community and revenue potential

Alignment with regenerative and educational missions

It offers a unique chance to prototype a regenerative real estate model that can be documented, iterated, and replicated...globally (with respect to the uniqueness of each land project).

Immediate Next Steps

1. Secure the \$35K+ house and renovations (via community loan, grant, or pooled investment).
1. Prioritize the house purchase—it's a key fixed asset.
2. Have lawyer review ground lease to finalize with trust.
1. Stellar Roots Ground Lease- revised 02-26-2025.docx.pdf
PDF

3. Map the land and zoning permissions to confirm viability of 70 residents + refine [Budget](#)
4. Confirm what resources (financial, legal, personnel) are accessible right now and Develop templates for:
 1. Subleases
 2. Steward agreements
 3. Improvements contribution
5. Refine the website + campaign describing "The Itsodi Model"
 1. Continuing capturing our story—video, blog, docuseries—to attract aligned support.
6. Host a fall 2025 retreat or build camp games to draw aligned contributors and investors.

Strategic Action Plan

PHASE 1: Foundation & Activation (0–6 Months)

Secure Base Assets

Acquire the \$35K house immediately; use for:

HQ/residency

AirBnB income

Office or studio

Loan collateral or micro-mortgage case study

Clarify zoning for 70 residents + sublease model.

✓ Legal & Financial Infrastructure

Draft [community member contracts](#) (e.g., eco-lease, stewardship license).

Develop land improvement agreement templates for tiny home dwellers.

Set up [fiscal sponsorship or umbrella nonprofit](#) (if needed for grant eligibility).

✓ [Create a Public-Facing Vision & Deck](#)

“The Itsodi Model”: a 69-acre eco-hamlet incubator for regenerative real estate.

Communicate your unique value: affordable land access + decentralized ownership.

✓ **Begin Fundraising + Infrastructure Mapping + Research Pairing**

Apply for grants (sustainability, housing, education).

Launch small-donor/member campaign: e.g. \$7/month to support steward-led villages.

Map water, energy, compost, trails, roads with community through Gamefied workshops i.e amazing race/survivor/hunger games that can be broadcast (Play is also an apparatus to address community conflict)

Begin natural infrastructure planning (rain catchment, solar, pervious paths, strawbale tiny homes).

Anchor Institution involvement.

PHASE 2: Prototyping and Monetizing (6–24 Months)

Pilot Housing & Income Units

Launch 3–5 “anchor resident” pods:

Subleased tiny homes, yurts, earthships

Rent = income + community labor agreements

Offer build-to-own or co-op equity structures

Build Low-Cost Infrastructure that Feels Luxurious (contradiction to stories of agriculture and poverty)

Composting toilets, solar microgrids, water collection, forest trails

Built via workshops and volunteering—document for replication.

Launch Learning & Incubation Programs

Eco-building, permaculture, governance, healing, cooperative economics

Participation or offer sliding-scale tuition are treated as investments and added to profile/portfolio of members who can become accredited micro investors across multiple land projects in the network.

Invite guest facilitators, cultural elders, and peer projects

Develop Platform Prototype

Start building the digital network layer:

Land steward profiles
Real estate micro-opportunities
Guides, templates, tools

PHASE 3: Replication and Globalization (2–5 Years)

Turn Itsodi into a Showcase

Refine it as a proof-of-concept village with:

Income, culture, ecological function, and housing

Invite press, researchers, and investors

Launch Stewardship Network & Services

A digital platform that matches:

Land (trusts, private, tribal, diasporic)

Stewards (residents, educators, cultivators)

Capital (impact investors, reparations, diaspora lending)

Offer consulting, workshops, and licensing of your framework

Create a Funding Entity

Community REIT, perpetual purpose trust, or regenerative real estate fund

Start acquiring or leasing sister sites across regions

Opportunity Assessment: *Itsodi* (refuge) in Amherst, VA

Strengths:

Long-term Control: A 99-year lease is as close to land ownership as possible while staying within a trust model.

Low Annual Cost: \$3,400/year for 69 acres is exceptionally low, giving room for reinvestment.

Ownership Path: \$35,000 to purchase a 1,000 sq ft house outright is a major leverage point—affordable and a possible income generator or operations HQ. Owning any Improvements made to the land.

Zoning & Capacity: Ability to host 70 long-term residents opens pathways to eco-village, intentional community, or cooperative housing with rent/investment streams.

Existing Use Case: Current use as a rustic event and camping site gives you a platform to build from, rather than from scratch.

Challenges:

Infrastructure Deficit: Bringing in water, power, sanitation, trenching roads, etc., for the property aside from the house will require upfront capital and planning.

Initial Capital Needed: Even affordable opportunities require startup funds.

Operational Load: Managing land, community, and income-generating activity is complex.

Shared Governance: The relationship with the land trust and

community must be clear and strong.

Is It Worth Keeping?

Yes—with a strategic plan and aligned leadership, this opportunity is a rare convergence of low-cost access to land, high community capacity, and a long runway for sustainable development.

It's particularly aligned with your larger vision: material wealth *through values-aligned development and* seeding a global stewardship network rooted in regenerative practices.

An integrated assessment followed by a detailed strategic action plan tailored to our goals of material wealth generation and global stewardship networking through micro real estate development.
